DIY Energy

Production, Distribution Consumption

My Future My Choice brings engineers and scientists from different energy businesses together into a team with opposing views about how we should produce and use energy in the future. Engineers are trained to interact with school students around issues illustrated by Rinky-Dink's DIY Energy Engineers.

A day event with practical applications using Rinky-Dink's Scrap Heap Energy Challenge that builds future-fit learners, who have experienced the science and considered the issues about future energy needs.

Workshops for primary, secondary, post 16 that include building your own generator s, exploring hydrogen power and playing the 'Power Generation Game'
